PACKAGING SERVICES

MHF five-yard self-standing bag loading product into a railroad gondola car.

MHF Services is a leader in providing packaging materials and packaging systems. Our primary mission is to develop, engineer, test and manufacture packaging and packaging systems. Our goal is to provide safe, compliant, cost-effective packaging solutions to our customers.

The right packaging system can ensure safety, improve efficiency and reduce costs. MHF Services maintains the infrastructure and manufacturing expertise to provide them all. We offer years of experience in material and product handling, in-depth knowledge of the transportation industry, innovative design and skilled engineering.

We provide a wide range of standard and custom packaging solutions that can be tailored to the needs of your project or manufacturing processes. Options include standard or custom intermodal shipping containers, metal containers, drums, boxes and any package required for shipping. Our flexible options include container liners, IBC bags, railcar liners, and custom-sewn containment systems.

MHF Services has provided water diversion systems for flooding and water filtration systems for dewatering projects. We also offer innovative and cost-effective railcar and truck tarps and large component protective covers.

Because we manufacture most of our items at our dedicated facility in Sweetwater, TN, our leads times for orders average less than seven days.

We provide all of our packaging systems under our stringent Quality Assurance Program, guaranteeing that they will meet and exceed customer expectations.

Our innovative ideas have saved customers millions of dollars without sacrificing compliance or damage to the products packaged. No job is too big or too small—we have made one to 10,000 packages, depending on the customer’s needs.

“MHF Services stepped up to the plate providing essential packaging and intermodal services to meet our ever changing project needs...Your entire team pulled out all the stops to make sure our critical project schedule was met from start to finish on a 24/7 basis.”

Cornelius M. Murphy
Fluor Project Director
